Research Security Public Disclosures and Acknowledgement

Trent's Research Security Allocation:

Trent University is committed to ensuring the safeguarding and security of research data and activities. Much of the research conducted at Trent is open and collaborative to allow the free flow of ideas and to advance fields of research. To maintain this environment it is important that we assess and take steps to mitigate risks, including with respect to security and with our research partners and collaborators. This includes: physical security of sites, equipment, and data; cybersecurity; biosafety; protection of personnel; and evaluation of partners and partnerships to ensure shared goals and a clear understanding of the people and organizations involved. As research continues to become more collaborative, it is important that we have an awareness of threats, as well as tools, guidelines, strategies, and best-practices for safeguarding research.

2022-2023 Performance Objective

Project title	Output (investment of research security funds)	Performance objective	Performance indicator	Target outcome
Effectiveness of current network security mechanisms	$25,162 invested to evaluate the effectiveness of current network security	Test the effectiveness of current network security mechanisms at the university	Gaps in prevention and detection controls identified and mitigation plan put in place	Identify gaps in prevention and detection controls to mitigate risks to research security
